Dear Abraham,

Find below your react tasks that @Howard will evaluate over the next 2 weeks:

Using the attached files for UI, create an event platform call Techpass. Users should be able to:

- Sign up
- Create their own user profile including a profile picture
- Create an event
- Edit event
- List events
- Save event as draft
- Publish event

Use the following tools:

React
Next.JS framework
https://flowbite-react.com/ - UI components
Use redux-toolkit for state management

Backend:
Use any preferred approach to manage your backend and DB. These two articles are great references -
https://www.prisma.io/react-server-components and https://vercel.com/guides/nextjs-prisma-postgres

Let us know when you finish or if you are facing challenges with the exercise.

Thanks
